

## **Secondary Programs**

Title: Facilities, Safety and Health

Professional-Technical Education classrooms and laboratories must provide a safe and healthy environment for faculty and students. It is the responsibility of the professional-technical educators to ensure a safe and healthy educational environment is maintained.

The Division has published guidance and specifications regarding such topics as facility layout, ventilation, lighting and safety standards, and equipment maintenance requirements. Recognizing the complexity of the ever changing safety and health standards, the Division no longer publishes separate safety and health guidance, but recommends appropriate safety instruction for the program area is included in the program curriculum. The Division recognizes the importance of providing a safe, healthy learning environment for faculty and students, and supports those standards and guidelines established by federal, state and local safety and health entities.

Program managers may be contacted regarding individual program area safety and health suggestions. Contact the program managers at 208-334-3216 or our website at [www.pte.idaho.gov](http://www.pte.idaho.gov) .
